

Choose Wet or Dry.

How big is your hay harvesting window?

(Usually not big enough!)

That's why silage baling, with the 554XL and a Vermeer Wrapper, fit so well into nearly any haying operation. With the low-cost silage option, the 554XL is designed to bale wet or dry and regularly handle the weight of a silage package baled at 50% to 65% moisture. And, with many years of silage baling under our belts, we have the experience to help you get the job done.

Take the weather out of baling hay and realize more control, more flexibility, better feed value and lower equipment costs.

Wrap your bales from the seat of your tractor!

The self-loading, trailer-mounted SW3500 Silage Wrapper loads one bale while the turntable wraps another. An automatic cut-and-tie system cuts and holds the film for the next bale. And a unique hydraulically-powered bale caddy gently rolls the bale onto the field, or side-tips it for easier handling and less puncture risk. It's that simple!

Discover the Silage Advantage.

■ The production advantage:

- Earlier starts!
- Faster re-growth!
- Extra cuttings!
- Less dry matter loss.
- More profit for the custom baler!

■ The timing advantage:

- Easier scheduling!
- Fewer worries when the crop is down!
- Better timing for harvesting at correct stage of maturity!
- More versatility! Bale dry hay or silage, depending on needs/conditions!

■ The forage advantage:

- A high-nutrition, high-energy forage product!
- More palatable and digestible.
- Increase in relative feed and value*.
- Less leaf loss and damage!

■ The livestock advantage:

- The ability to “select feed.”
- Lower protein additive costs!
- Less grain to feed.

■ Lower equipment costs:

- No conditioners. No tedders. No choppers. No blowers. No wagons. No expensive silos. No storage sheds.

Simply the best way to harvest and store high-moisture hay!
